PROFESSIONAL SUMMARY

Frontend Developer with ~4 years of hands-on experience in building scalable, secure, and high-performance web applications using React.js. Proven expertise in developing e-governance platforms handling lakhs of concurrent users. Specialized in complex form handling, state management, secure authentication flows, and dynamic reporting. Strong problem-solving skills with a track record of delivering end-to-end user interfaces for state-wide centralized portals.

TECHNICAL SKILLS

- **Frontend Technologies:** React.js, JavaScript (ES6+), HTML5, CSS3.
- **State & Form Management:** Redux, react-hook-form, Context API.
- **Security & Session:** JWT Authentication, Refresh/Access Token mechanisms, sessionStorage, Protected Routes, Role-Based Access Control (RBAC).
- **Integration & Tools:** REST APIs, Axios, Payment Gateway Integration, Git.
- **Backend Knowledge:** Spring Boot (API Integration), SQL (Basic Selects).

WORK EXPERIENCE

Frontend Developer | APCFSS

Aug 2022 – Present

Project 1: CAP (Common Admission Portal for AP State)

- **Description:** A unified, state-level admission platform handling applications and processing for major entrance exams (EAPCET, ECET, ICET, PG CET, LAWCET) utilized by lakhs of students.
- **Responsibilities:**
 - Architected and developed comprehensive student application workflows using React.js, optimizing performance and preventing unnecessary DOM re-renders using react-hook-form.
 - Integrated highly secure, third-party Payment Gateways to handle large volumes of application fee transactions seamlessly.
 - Implemented Role-Based Access Control (RBAC) to differentiate UI and functionalities between Students and HODs (e.g., enabling secure application editing in HOD logins).
 - Developed features for application verification, dynamic data preview, and print-ready application generation.

Project 2: JNB Nivas (AP Residential Schools & Hostels Management System)

- **Description:** A centralized workflow management system tracking the lifecycle, biometric attendance, and daily operations (like Diet processing) for various AP residential schools.
- **Responsibilities:**
 - Engineered a scalable, config-driven reporting module that generates diverse UI reports using a single reusable JavaScript component and backend API, significantly reducing code redundancy.
 - Designed a secure authentication architecture using Refresh Tokens, aligning session timeouts strictly with token expiration logic to prevent unauthorized access.

- Implemented isolated multi-tab session management utilizing sessionStorage, ensuring unique user states across multiple browser tabs without data collision.
- Built real-time tracking dashboards for Diet processes, Staff/Student registrations, and Inspection reports.

Project 3: AP Universities Recruitment & Residential Admissions

- **Description:** End-to-end recruitment and admission portals for AP Universities and multiple residential societies including APSWREIS, BCREIS, Tribal, AP Model Schools, and KGBV.
- **Responsibilities:**
 - Leveraged Redux and local state variables to manage complex application states across multi-step registration forms.
 - Secured application routes using Protected Routing to ensure only authenticated and authorized users could access sensitive applicant data.
 - Streamlined the API integration process to fetch, map, and display large datasets for university recruitment workflows.

EDUCATION

- **Diploma in Computer Engineering**, Tirupati, [Year]
- **Degree (Foundation Course Pending)**, [Place]
